Stand-up Pouch Contract Packing

Introducing our in-house machine and options

Stand-up Pouches (Doypacks / Flat-bottom Pouches)

If you are looking for a way to package your powdered food products more quickly, efficiently, and affordably, you should consider a stand-up pouch (also called doypack) or flat-bottom pouch packaging.

Stand-up and flat-bottom pouches are a type of flexible packaging that is sustainable, easy to customize and an excellent solution for many products and industries.

The pouches can be created from a single or several layers of different types of materials, come in many sizes and can be customized to fit the product, and they can include extra features such as spouts, valves, punched handles and more.

Pouch packaging is designed to operate hands-free, which limits contact with the food product and makes the packaging process fast and affordable.
